

A BETTER FUTURE IS SERVED.

Milliken's Napery group is doing its part to help our planet improve. We're eliminating landfill waste, recycling water, saving energy, using smarter materials, and of course, protecting from any messes that could occur. With our textile collections, new sustainable ideas are making their way to the table every day.

Water reduction

One hundred percent of Napery fabrics run through our Pendleton Finishing Plant, which currently reduces water use in textile production by an average of 53,000 gallons per day. We are making progress toward our goal of reducing indexed water usage by ~25% by 2025.

Oeko-Tex certified

Many of our products carry the STANDARD 100 by OEKO-TEX® certification, one of the world's best-known product safety labels for textiles. The certification signifies that our products have been tested and found to contain no harmful substances.

Recycled content

Milliken & Company regularly partners with third-party firms and fiber brands to divert plastic from landfills, lower our greenhouse gas (GHG) emissions and conserve water and energy. Our Signature® table linens are available with REPREVE® fiber, with 1.3 recycled polyethylene terephthalate (PET) bottles in every napkin.

Designed to last

The most sustainable napkin is one that doesn't need to be replaced. Milliken's Napery team develops fabrics to outlast competitive materials and exceed industrial laundry standards, even after frequent washing. With innovative soil release technology, our Signature® table linens are highly durable and designed to last.
